

## Advantages & Disadvantages of ARV Components Recommended for Initial Tx in Children<sup>1</sup>

class	ARV	advantages	disadvantages
INSTIs (alpha order)	All INSTIs	<ul style="list-style-type: none"> <li>Well-tolerated</li> </ul>	<ul style="list-style-type: none"> <li>Possible ↑wt in adults, esp. Black/African American women</li> <li>Potential for multiple drug interactions due to hepatic metabolism</li> <li>Oral absorption can be reduced by simultaneous admin. w/ polyvalent cations</li> </ul>
	BIC	<ul style="list-style-type: none"> <li>Once daily</li> <li>Can give w/ or w/o food</li> <li>Avail. as FDC</li> <li>Higher barrier to resistance vs. RAL</li> </ul>	<ul style="list-style-type: none"> <li>FDC tab <b>not recommended</b> in hepatic impairment or est. CrCl &lt;30 mL/min</li> <li>CNS side effects, esp. sleep disturbances; depression and suicidal ideation rare, usually in pts w/ psychiatric dz hx</li> <li>CYP3A4 and UGT1A1 substrate, potential for drug interactions</li> <li>Inhibits tubular secretion of creatinine; incr. SCr w/o affecting glomerular fxn; generally benign</li> </ul>
	DTG	<ul style="list-style-type: none"> <li>Once daily</li> <li>Can give w/ or w/o food</li> <li>Avail. as FDC</li> <li>Single-agent DTG avail. in several strengths, small tab size</li> <li>Avail. as dispersible tab for susp</li> <li>Higher barrier to resistance vs. RAL</li> </ul>	<ul style="list-style-type: none"> <li>UGT1A1 substrate, potential for drug interactions</li> <li>CNS side effects, esp. sleep disturbances; depression and suicidal ideation rare, usually in pts w/ psychiatric dz hx</li> <li>Inhibits tubular secretion of creatinine; incr. SCr w/o affecting glomerular fxn; generally benign</li> </ul>

## Advantages & Disadvantages of ARV Components Recommended for Initial Tx in Children<sup>1</sup>

class	ARV	advantages	disadvantages
	<b>RAL</b>	<ul style="list-style-type: none"> <li>• Can give w/ or w/o food</li> <li>• Avail. as tab, chew tab, and granules for susp</li> <li>• Chewable tabs can be crushed/mixed w/ various liquids for infants <math>\geq 4</math> wk old and <math>\geq 3</math> kg</li> <li>• Favorable lipid profile</li> </ul>	<ul style="list-style-type: none"> <li>• Lower barrier to resistance vs. boosted PI-, BIC-, or DTG-based regimens</li> <li>• UGT1A1 substrate, potential for drug interactions</li> <li>• Depression and suicidal ideation rare, usually in pts w/ psychiatric dz hx</li> <li>• Incr. in CK, myopathy, and rhabdomyolysis have been reported</li> <li>• Potential for rare allergic rxn/hepatitis</li> <li>• Granule form requires multistep prep; requires caregiver instruction</li> <li>• Higher pill burden than other INSTI-based regimens; no FDC form</li> </ul>
<b>NNRTIs</b> (alpha order)	<b>All NNRTIs</b>	<ul style="list-style-type: none"> <li>• Long half-life</li> <li>• Lower risk of dyslipidemia/fat maldistribution vs. PIs</li> <li>• PI-sparing</li> <li>• Lower pill burden for children taking solid form; easier to use vs. PI-based regimens</li> </ul>	<ul style="list-style-type: none"> <li>• Prevalence of NNRTI-resistant strains in ART-naïve pts; low barrier to resistance; single mutation can confer resistance, w/ cross-resistance between EFV and NVP</li> <li>• Rare but serious, life-threatening skin rash, incl. SJS, and hepatic toxicity (greatest risk w/ NVP), although none of these have been reported in neonates</li> <li>• Potential for multiple drug interactions due to hepatic metabolism</li> </ul>

## Advantages & Disadvantages of ARV Components Recommended for Initial Tx in Children<sup>1</sup>

class	ARV	advantages	disadvantages
	<b>DOR</b>	<ul style="list-style-type: none"> <li>• Once daily</li> <li>• Avail. as FDC</li> <li>• Can give w/ or w/o food</li> <li>• Maintains antiviral activity in the setting of some NNRTI mutations</li> <li>• Favorable lipid profile</li> <li>• Not assoc w/ wt gain vs. boosted DRV or EFV</li> </ul>	<ul style="list-style-type: none"> <li>• Neuropsych AEs (fewer compared w/ EFV)</li> <li>• Contraindicated w/ strong CYP3A inducers</li> <li>• Potential for CYP3A4 drug interactions</li> <li>• Tx-emergent DOR resistance mutations may confer resistance to some NNRTIs</li> </ul>
	<b>EFV</b>	<ul style="list-style-type: none"> <li>• Once daily</li> <li>• Avail. as FDC</li> <li>• Potent ARV activity</li> <li>• Can give w/ food (except high-fat meals); recommended to take on empty stomach</li> <li>• May open capsules, add to food</li> </ul>	<ul style="list-style-type: none"> <li>• Neuropsych AEs incl. dizziness, abnormal dreams, HA, depression, suicidality, insomnia, somnolence; HS dosing recommended to reduce CNS effects</li> <li>• Rash (generally mild); QT prolongation; dyslipidemia</li> <li>• Potential for CYP3A4 drug interactions</li> <li>• No commercially avail. liquid form</li> <li>• Limited dosing data for children &lt;3 yo</li> <li>• No dosing data for children &lt;3 mo</li> </ul>
	<b>NVP</b>	<ul style="list-style-type: none"> <li>• Liquid form avail.</li> <li>• Dosing info for young infants avail.</li> <li>• Can give w/ or w/o food</li> <li>• ER form allows once-daily dosing in older children</li> </ul>	<ul style="list-style-type: none"> <li>• Reduced virologic efficacy in young infants, regardless of peripartum NVP exposure</li> <li>• ↑incidence of rash/HSR vs. other NNRTIs</li> <li>• ↑rate of serious hepatic toxicity vs. EFV</li> <li>• Decreased virologic response vs. EFV</li> <li>• BID dosing needed in children w/ BSA &lt;0.58 m<sup>2</sup></li> <li>• Lower resistance barrier</li> </ul>

## Advantages & Disadvantages of ARV Components Recommended for Initial Tx in Children<sup>1</sup>

class	ARV	advantages	disadvantages
	<b>RPV</b>	<ul style="list-style-type: none"> <li>• Once daily</li> <li>• Avail. as FDC</li> </ul>	<ul style="list-style-type: none"> <li>• Don't use if HIV VL &gt;100K copies/mL</li> <li>• Must take w/ ≥500-kcal meal at same time daily (may affect adherence)</li> <li>• Potential for CYP3A4 drug interactions</li> <li>• Oral absorption ↓ w/ incr. gastric pH; use w/ PPIs contraindicated</li> <li>• Low resistance barrier</li> <li>• Depression, HA, rash, QTc prolongation</li> </ul>
<b>PIs</b> (alpha order)	<b>All PIs</b>	<ul style="list-style-type: none"> <li>• NNRTI-sparing</li> <li>• Clinical, virologic, immunologic efficacy well-documented</li> <li>• Higher barrier to resistance vs. NNRTIs and RAL; PI resistance requires multiple mutations</li> <li>• When combined w/ dual-NRTI backbone, targets HIV at 2 steps of replication (inhibits viral RT and protease)</li> </ul>	<ul style="list-style-type: none"> <li>• Metabolic complications (dyslipidemia, fat maldistribution, insulin resistance)</li> <li>• Potential for multiple drug interactions due to hepatic metabolism</li> <li>• ↑pill burden vs. NRTI-/NNRTI-based regimens for pts taking solid forms</li> <li>• Poor palatability of liquid preps (may affect adherence)</li> <li>• Most PIs require RTV/COBI boosting; thus, more drug interactions</li> </ul>

## Advantages & Disadvantages of ARV Components Recommended for Initial Tx in Children<sup>1</sup>

class	ARV	advantages	disadvantages
	<b>Boosted ATV</b>	<ul style="list-style-type: none"> <li>• Once daily</li> <li>• Powder form avail.</li> <li>• ATV has less effect on TG, total cholesterol levels vs. other PIs (however, RTV boosting is assoc w/ these)</li> </ul>	<ul style="list-style-type: none"> <li>• No liquid form</li> <li>• Admin. w/ food</li> <li>• Indirect hyperbilirubinemia is common but asymptomatic. Scleral icterus may be distressing, affect adherence</li> <li>• Cholelithiasis, nephrolithiasis, PR interval prolongation</li> <li>• Use w/ caution w/ preexisting conduction system defects (can prolong PR interval)</li> <li>• RTV/COBI assoc w/ many drug interactions</li> <li>• Absorption ↓ when given w/ acid-lowering agents</li> <li>• COBI inhibits tubular secretion of creatinine; incr. SCr w/o affecting glomerular fxn; generally benign</li> </ul>
	<b>Boosted DRV</b>	<ul style="list-style-type: none"> <li>• Once daily in children ≥12 yo</li> <li>• Liquid form avail.</li> <li>• DRV requires a boosting agent</li> <li>• Avail. as FDC</li> </ul>	<ul style="list-style-type: none"> <li>• Pedi pill burden high w/ current tablet dose forms</li> <li>• Admin. w/ food</li> <li>• Must be boosted to achieve adequate plasma concentrations</li> <li>• Contains sulfa moiety (cross-sensitivity w/ sulfonamides unknown)</li> <li>• Hyperlipidemia, incr. transaminases</li> <li>• RTV/COBI assoc w/ many drug interactions</li> <li>• Can only be used once daily in absence of certain PI-associated resistance mutations</li> <li>• COBI inhibits tubular secretion of creatinine; incr. SCr w/o affecting glomerular fxn; generally benign</li> </ul>

## Advantages & Disadvantages of ARV Components Recommended for Initial Tx in Children<sup>1</sup>

class	ARV	advantages	disadvantages
	<b>LPV/r</b>	<ul style="list-style-type: none"> <li>• LPV is the only PI avail. coformulated w/ RTV in liquid and tab forms</li> <li>• Tabs may be given w/o regard to food, but better tolerated w/ meal/snack</li> </ul>	<ul style="list-style-type: none"> <li>• Poor palatability of liquid form (bitter), although palatability of FDC better than RTV alone</li> <li>• Give liquid form w/ food</li> <li>• RTV assoc w/ many drug interactions</li> <li>• Should not be given to infants before postmenopausal age of 42 wk and postnatal age ≥14 days</li> <li>• Use w/ caution if preexisting conduction system defects (can prolong PR and QT interval)</li> </ul>
<b>Dual-NRTI backbones</b> (alpha order)	<b>ABC + (3TC or FTC)</b>	<ul style="list-style-type: none"> <li>• Palatable liquid forms</li> <li>• Can give w/ or w/o food</li> <li>• Avail. as FDC</li> </ul>	<ul style="list-style-type: none"> <li>• Risk of ABC HSR; perform HLA-B*5701 screening before initiating ABC tx</li> <li>• ABC has been assoc w/ CV dz and cardiac events in some, but not all, observational studies in adults</li> </ul>
	<b>FTC/TAF</b> for kids ≥6 yo	<ul style="list-style-type: none"> <li>• Once daily</li> <li>• Small tab size</li> <li>• Lower risk of TFV-associated renal and bone toxicity w/ TAF vs. w/ TDF in adults</li> <li>• Avail. as FDC</li> <li>• Active against HBV; recommended dual-NRTI option for pts w/ coinfection</li> </ul>	<ul style="list-style-type: none"> <li>• Limited safety/efficacy data of this combo in children</li> <li>• ↑lipid levels</li> </ul>

## Advantages & Disadvantages of ARV Components Recommended for Initial Tx in Children<sup>1</sup>

class	ARV	advantages	disadvantages
	<b>TDF + (3TC or FTC)</b>	<ul style="list-style-type: none"> <li>• Once-daily dosing for TDF</li> <li>• Resistance slow to develop</li> <li>• Lower risk of mitochondrial toxicity vs. other NRTIs</li> <li>• Can give w/ or w/o food</li> <li>• Avail. as lower-strength tabs/oral powder for use in younger children</li> <li>• Avail. as FDC</li> <li>• Active against HBV; recommended dual-NRTI option for pts w/ coinfection</li> </ul>	<ul style="list-style-type: none"> <li>• Limited pedi experience</li> <li>• Potential bone and renal toxicity</li> </ul>
	<b>ZDV + (3TC or FTC)</b>	<ul style="list-style-type: none"> <li>• Extensive pedi experience</li> <li>• Coformulations of ZDV/3TC avail. (Combivir, generic) for children ≥30 kg</li> <li>• Palatable liquid forms</li> <li>• Can give w/ or w/o food</li> <li>• FTC avail. as palatable liquid form for once-daily admin.</li> </ul>	<ul style="list-style-type: none"> <li>• Bone marrow suppression w/ ZDV</li> <li>• Lipoatrophy w/ ZDV</li> <li>• ZDV requires bid dosing</li> </ul>
